

ANNAH MWERU NICHOLA

Full Stack Engineer | Angular · Node.js · TypeScript

Nairobi, Kenya | annmweru9@gmail.com | +254 714 691 909 | <https://annahmweru-dev.netlify.app/>

PROFESSIONAL SUMMARY

Full Stack Engineer with 4+ years of experience across government, financial services, and enterprise environments. Delivered production Angular applications on the live Ardhisasa government platform, high-volume digital banking products at I&M Bank on the Backbase Engagement Banking Platform, and full-stack internal systems in the petroleum logistics industry. Proficient in Angular, Node.js, REST/SOAP integrations, AWS deployments, and Angular version migrations. Thrives in Agile teams and collaborates directly with stakeholders to ship reliable, maintainable software at scale.

CORE TECHNICAL SKILLS

- Frameworks & Languages: Angular (v8–v18), AngularJS, TypeScript, JavaScript (ES6+), React, Node.js, NestJS
- State Management & APIs: NgRx, RxJS, Redux, Zustand, Observables, Signals
- APIs & Auth: RESTful APIs, SOAP/XML, JSON, JWT, OAuth 2.0
- Styling & UI: HTML5, CSS3, SCSS, Angular Material, Tailwind CSS, Bootstrap, Figma (pixel-perfect), WCAG Accessibility
- Testing: Cypress (E2E), Jasmine, Jest (unit & integration)
- DevOps & Cloud: Docker, Kubernetes (KCNA), GitHub Actions, GitLab CI/CD, Vercel, Netlify, AWS, Azure.
- Databases: SQL Server, PostgreSQL, MySQL, MongoDB
- Version Control & Collaboration: Git, GitFlow, GitHub, GitLab

PROFESSIONAL EXPERIENCE

Software Engineer | Woodsman Limited (Hybrid) June 2026 – Present

- Designing, developing, and maintaining full-stack web applications using Angular on the frontend and Node.js on the backend to support internal petroleum logistics and transport operations.
- Building and consuming RESTful APIs connecting Angular frontend modules to Node.js backend services, ensuring clean data contracts, validation, and error handling across the stack.
- Managing and querying PostgreSQL and MongoDB databases, designing schemas and writing optimised queries to support operational data needs across the business.
- Collaborating with operations and logistics stakeholders to translate business requirements into technical solutions that address real transport and fuel management workflows.
- Ensuring application security through JWT authentication and role-based access control, protecting sensitive operational data across user roles.
- Containerising and deploying backend services using Docker and AWS, maintaining consistency across development and production environments.
- Writing and maintaining unit and integration tests to uphold code quality and reduce regression across critical application flows.
- Conducting code reviews and enforcing standards around performance, scalability, security, and maintainability across the codebase.
- Participating in Agile/Scrum ceremonies including sprint planning, stand-ups, backlog refinement, and retrospectives.

Frontend Developer | I&M Bank Nov 2025 – May 2026

- Developing and maintaining production Angular journeys on the Backbase Engagement Banking Platform, working within the Journey Architecture model extending and customising pre-built Backbase journeys and SDK components rather than building from scratch, enabling faster delivery aligned with Backbase best practices.
- Delivered a high-volume multicurrency prepaid card platform featuring Mastercard international card capabilities including card listing, real-time balance visibility, and full transaction management for multi-currency wallets.

- Implemented end-to-end statement services covering on-demand PDF generation, paginated transaction history, email delivery, and in-browser document viewing, integrating with backend microservices via RESTful API contracts.
- Built, the "Fikisha Card Goal Warning" features a real-time alerting system that surfaces expected impacts of deposits and withdrawals to improve customer financial transparency.
- Enhanced account verification API integration for local transfer payments, ensuring accurate pre-transaction account validation and improving reliability of payment processing flows.
- Extended and configured Backbase Design System (BDS) components using Angular CDK and custom SCSS theming to meet I&M brand standards without forking core Backbase libraries.
- Led the migration of Angular version 12 to Angular 18, modernising the codebase to leverage standalone components, updated lifecycle APIs, and improved build performance ensuring compatibility with the latest Backbase SDK versions and reducing technical debt across the platform.
- Collaborated closely with backend engineers on API contract definitions, payload structure, and error-handling strategies across distributed banking microservices.
- Wrote and maintained unit and integration tests (Jasmine/Karma) for Angular modules, maintaining coverage thresholds and driving down regression defects in critical journeys.
- Performed regular code reviews, enforcing standards around performance, scalability, accessibility, and edge-case handling in Backbase journey modules.
- Participated actively in Agile/Scrum ceremonies daily stand-ups, sprint planning, backlog refinement, and retrospectives contributing to iterative delivery within a cross-functional engineering team.

Frontend Developer | Konza Silicon — Ardhisa (Government Platform) *Feb 2022 – Nov 2025*

- Led zero-downtime migration of the entire SPA from Angular v8 to v16 on a live government production platform, maintaining continuous service throughout a risk-managed release cycle.
- Designed and built reusable Angular UI component libraries with strict separation of business and presentation logic, reducing developer onboarding time and enabling IT Operations self-sufficiency.
- Integrated frontend with REST, JSON, and SOAP/XML backend services for the Land Search workflow, managing complex async data flows via RxJS Observables.
- Built multi-stakeholder approval workflows for Long Term and Short Term Lease Applications using reactive state management and backend-driven PDF generation.
- Implemented a Bulk Printing feature for Sectional Registration Plans using Node.js, enabling simultaneous certificate processing and significantly cutting manual turnaround time.
- Carried out structured code reviews across all Angular modules; enforced standards via Husky pre-commit hooks, reducing broken builds and improving code quality.
- Delivered pixel-perfect, WCAG-accessible interfaces by translating Figma designs into production Angular code, maintaining consistency across the entire platform.
- Served as interim Team Lead: coordinated sprint tasks, maintained delivery timelines, and conducted knowledge-transfer sessions to IT Operations teams.

Frontend Developer Intern | Metropol Corporation — Credit Reference Bureau *Sep 2021 – Jan 2022*

- Collaborated with senior developers and product teams to understand business requirements and translate them into frontend features within agile sprint cycles.
- Participated in QA testing and bug fixing, identifying UI inconsistencies and ensuring cross-browser compatibility across dashboard modules.
- Integrated RESTful APIs to dynamically populate dashboard views with real-time credit bureau data, handling data binding, error states, and loading feedback.
- Assisted in debugging and stabilizing production issues in a multi-tenant financial reporting system used by over 50 institutions.
- Gained hands-on exposure to data-sensitive application development, working within compliance-conscious environments handling financial and personal credit information.

EDUCATION

BSc Information Technology — Zetech University *Second Class Upper*

Diploma in Information Technology — Zetech University *Credit*
