PROFESSIONAL PROFILE

Angular frontend developer with 4+ years of production experience and KCNA certification in Kubernetes and cloud-native fundamentals. Proven track record shipping scalable SPAs in government and fintech environments including a zero-downtime Angular v8-to-v16 migration on a live government platform. Experienced in state management (NgRx, RxJS), RESTful and SOAP/XML API integration, reusable component architecture, and mentoring developers. Now building full-stack and cloud-native skills (Docker, K8s, CI/CD) to deliver end-to-end from UI to production deployment. Open to remote and Nairobi-based product roles.

CORE TECHNICAL SKILLS

Frontend: Angular (v8–v18), TypeScript, React, JavaScript (ES6+), HTML5, CSS3, SCSS
State & Reactivity: NgRx, RxJS, Observables, Subjects, Signals, async/await, Promises
APIs & Auth: RESTful APIs, SOAP/XML, JSON, JWT, OAuth 2.0, Web Services
Styling & UX: Angular Material, Tailwind CSS, Bootstrap, SASS, Figma, WCAG Accessibility
Testing: Cypress (E2E), Jasmine, Jest
DevOps & Tools: Docker, Kubernetes, Helm, GitHub Actions, Git, GitLab, CI/CD (Netlify, Vercel), Husky
Backend & DB: Node.js, NestJS (in progress), PostgreSQL, MySQL, MS SQL Server, Oracle
Cloud: Kubernetes / KCNA Certified · AWS fundamentals (in progress)

CERTIFICATIONS

Kubernetes and Cloud Native Essentials (KCNA) — *Linux Foundation / Andela* | 2026

Google UX Design Fundamentals — Google

JavaScript Algorithms and Data Structures — freeCodeCamp

Responsive Web Design — freeCodeCamp

PROFESSIONAL EXPERIENCE

Angular UI Developer | **Konza Technopolis Development Authority** *Feb 2022 – Nov 2025*

Government Smart City & Technology Agency | Hybrid

- Led zero-downtime Angular v8-to-v16 migration on a live government production platform, refactoring the entire SPA architecture while maintaining continuous service for all end users.
- Architected reusable Angular UI component libraries with strict separation of business and presentation logic, improving maintainability and developer onboarding speed across multiple government workflows.
- Integrated Angular UI with REST, JSON, and SOAP/XML backend services for the Land Search workflow handling complex async data flows using RxJS Observables for ownership verification, encumbrance checks, and historical land record retrieval.
- Built multi-stakeholder approval workflows for Long Term and Short Term Lease Applications, managing reactive state across components with backend-driven PDF title generation.
- Implemented Bulk Printing for Sectional Registration Plans using Node.js, enabling simultaneous printing of multiple lease certificates and significantly cutting manual processing time.

- Delivered pixel-perfect, WCAG-accessible interfaces across all modules, transforming Figma designer comps into production-quality Angular UI.
- Introduced Husky and pre-commit hooks to enforce code quality standards team-wide, reducing broken builds and improving code review efficiency.
- Mentored junior developers, conducted structured code reviews, and served as interim Team Lead coordinating sprint tasks and maintaining delivery timelines.
- Collaborated directly with backend teams on REST API contracts, payload structures, and error handling strategies, ensuring reliable cross-service integration.

Freelance Angular Developer | **Multiple Clients** *Oct 2025 – Present*

- Built responsive, mobile-first Angular 16+ SPAs for clients delivering reusable UI components, RESTful API integrations, and clean separation of business logic for each workflow.
- Implemented WCAG accessibility standards and SEO-friendly SPA architecture; integrated Google Analytics and Firebase to track engagement and optimise user experience.
- Containerised client apps with Docker and set up GitHub Actions CI/CD pipelines bridging frontend delivery with cloud-native deployment best practices.

Frontend Developer Intern | **Metropol Corporation** *Sep 2021 – Jan 2022*

Credit Reference Bureau serving 50+ financial institutions

- Reduced frontend API latency by 35% through payload optimisation, directly improving dashboard responsiveness for end users across 50+ financial institutions.
- Contributed Angular and AngularJS modules to a credit reporting SPA consuming REST, JSON, and XML microservices implementing auth state management and robust error handling.
- Built a reusable Angular component library that improved UI consistency and eliminated code duplication across the platform.

EDUCATION

BSc Information Technology — Zetech University | 2019–2022 | Second Class Upper

Diploma in Information Technology — Zetech University | 2017–2019 | Credit

CURRENTLY BUILDING

NestJS full-stack apps · Angular Signals & standalone components · Helm charts & K8s deployments · CKA certification (next target) · AWS Solutions Architect Associate
